

IMPROVED GENERIC PROFILES WITH BACKWARD SCORE COMPARABILITY

QGEN[®] Generic Health Measures

The generic health QOLIX module (QGEN) is comprised of 10 content domains, including the 8 domains in legacy MOS health surveys. QGEN is available as 10-item and longer length static forms and also using adaptive ASLX administration in which respondents typically have answered 10-30 questions. Regardless of form, scores for the 10 generic domains are used to estimate generic health profiles as well as summary PHGS[™] (Physical Health General Score) and EHGS[™] (Emotional Health General Score) measures, all of which are standardized and normed to have a mean of 50 (SD=10) in the general US population in 2011 (higher QGEN scores indicate better QOL).

GENERIC DOMAINS

Physical Functioning	Vitality
Role General	Social Functioning
Role Physical	Role Emotional
Pain Impact	Emotional Health
General Health	Health Distress
